Dear Twitter,

My experience, passion, soft skills as well as technical skills put me in a great position to help Twitter greatly in building mobile applications as an intern. As a rising senior and computer science major I have built up the social and technical skills to be an effective and efficient contributor to any project.

My experience as a mobile development intern at Education First last summer in China has provided me with a useful perspective and invaluable understanding of how to build applications (especially mobile). During my employment I was heavily involved with my manager and UX/UI designers in order to build a useful and functional application in eight weeks. In order to build a working and attractive application I learned to navigate the Apple SDK and Swift 2.0 in a very short amount of time. I also learned how to communicate effectively about software, even with those that did not speak English.

Furthermore my experience at UCSD has provided me with soft skills that are essential in teams. During my college career I've been involved in social organisations outside of school and I have been active in class group projects. I have learned how to work together effectively with diverse groups and how to create networks that lead to projects and accomplishments. I have even taken a course on leading diverse teams.

In my resume I've included relevant coursework, more information on my past projects, links to my projects as well as my personal website. Feel free to call me at (510)-432-7144 in order to set up a meeting. I'm looking forward to hearing back from you.

Sincerely,  
Paul Wallace
